

UNIMIX LB7/4

SALIENT FEATURES

- High output of upto 800 kgs/hr
- Enhance the value of mixing thro' homogeneous blending
- Efficient opening and cleaning with Flexible grid bar setting
- Homogeneous blending
- Large amount of buffer volume and high throughput ensures minimum space requirement

UNIMIX - THE COMBINED BLENDING AND CLEANING MACHINE FOR UNIVERSAL APPLICATION

- The combination of the automatic bale plucker and the blender results in extremely good, homogeneous and consistent blend of material.
- Intensive three point blending through simultaneous feeding of all the vertical fibre through depositing chutes by means of a turbulent airstream (instantaneous blending), deflection of the fibre layers by 90 degrees and applying of path/time differential to the different components (blending by doubling) and the return of overflow into the blending chamber (intensive blending)
- With or without opening and cleaning rollers for universal application-cotton, manmade fibers or synthetics and their blends.
- The combined blending and cleaning in one machine results in considerable savings in the power and volume of air handled.
